

# AIR ADJUST™ ROW CLEANER

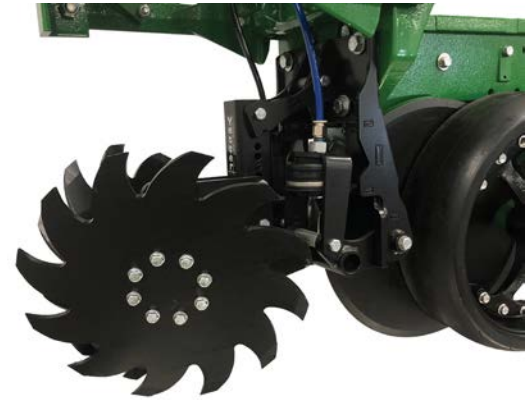

Planting conditions change each year. Field conditions vary. Be in control with the Yetter Air Adjust Row Cleaner.

The Air Adjust Series of products lets you make real-time adjustments. With pneumatic in-cab settings, up and down air bags allow the row cleaner to float and follow the soil contour. You'll move the right amount of residue, clods, rocks, and dry soil from your seed row for ideal seed-to-soil contact.

## COVER MORE ACRES IN LESS TIME

When you're in the field, getting out to adjust your row cleaners takes discipline and costs valuable time. But if you let them run incorrectly, you could:

- Hairpin residue against seeds
- Move soil instead of residue

Hairpinning is especially costly because it can lead to late emergence, diseases, tied-up nutrients—and a loss of profitability.

With the pneumatically controlled Air Adjust Row Cleaner, you can respond instantly to the unique and changing conditions of your field, without ever leaving your cab. Adjustments are made with a touchscreen and done in seconds. Not only will you be set up for better yields, you'll cover more acres in less time and boost your profitability.

### In-cab monitor capabilities

**7 RD CIRCUIT** > Sends pressure to the down pressure air bags on the left and right wing sections of planter. If planter is plumbed differently, the circuit can be renamed by pressing icon that says ROWS DN: WINGS.

## SPOTLIGHT ON THE AIR ADJUST WITH CONTROLLER CAPABILITIES WALK-THROUGH

# A CLOSER LOOK: PNEUMATIC CONTROLS FOR SUPERIOR RESIDUE MANAGEMENT

Pneumatic adjustments are made with Wi-Fi controls on a tablet or iPad, or through an existing ISOBUS monitor. The in-cab system is easy to use and offers a wide range of controls.

1. Fine-tune up and down pressure and operating depth independently to ensure you're moving the desired amount of residue. The digital readout shows exactly what pressures are being used. There are also three outputs, so the center frame can be controlled independently of the wings.
2. Program up to five presets for your planting conditions (for example, save custom settings for light, medium, and heavy residue).
3. Increase pressure to boost rigidity.
4. Raise row cleaners completely when you pass through wet areas of your fields, waterways, headlands, terraces, end rows, etc.
5. Continual monitoring shows whether target pressures are being maintained.

## ROW CLEANERS PROVIDE ROI

Row cleaners top the list when it comes to planter upgrades. Properly set row cleaners improve planter performance and seed emergence by:

Moving residue out of the row without engaging too much soil

Creating a smooth ride for gauge wheels, reducing planter bounce

Clearing the way for consistent seeding depth and even emergence

Delivering ROI through better crop stands and higher yields

# AIR ADJUST SERIES: BEYOND THE ROW CLEANER

Yetter Farm Equipment offers a whole lineup of Air Adjust products so you can meet the needs of your planting operation.

- 2940 Row Cleaner - wide and narrow row widths available
- 2940 Coulter/Row Cleaner Combo
- 2940 Firming Wheel
- 2940-020 Rolling Basket
- 2940 In-Cab Controller
- 2940 Hydraulic or Electric Compressor Options

2940 Firming Wheel

2940 Firming Wheel

2940 Coulter/Row Cleaner Combo

2940 In-Cab Controller (ISOBUS)

2940 In-Cab Controller (Wi-Fi controls)

2940 Electric Compressor

2940 Hydraulic Compressor

## REAL WORLD SOLUTIONS FOR REAL FARMERS

"We are constantly adjusting our row cleaners as we go through the field, because making little changes can affect the whole year's crop. Getting out three or four times, it gets old. We have a limited window of time to plant, so the time saving is great. With Air Adjust Row Cleaners, I just hit a button and they go to the preset I've saved."

Justin Martz, IL
